## DETAILED ACTION

### Response to Arguments

Applicant's response filed 6/8/03 has been carefully considered with the following effect;

- a. Applicant's arguments with respect to claims 1, 17 and 19 have been considered but are moot in view of the new ground(s) of rejection.

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1, 3, 5 - 7, 9, 11- 13, 15, 17 – 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Crook et al (US 5274336).

**As to claims 1, 7, 19, 20**, Crook et al disclose (figs 3, 4, 5A and 11) an RF probe (102) including

A conductive return (306);

An insulator (308) having a contact surface (310);

A probe conductor (306) positioned adjacent to the insulator contact surface (310)

A termination (106) electrically positioned between the conductive return (306) and the probe conductor (306), wherein the probe conductor (306) is equidistant with the insulator (308) along the entire contact surface (310, fig 7A)

**As to claims 3, 5,6, 9, 11, 12, 15, 17, 18,** Crook et al disclose (fig 13) a semiconductor device , a resistor and a diode (all this elements are the components of the amplifiers)

**As to claim 13,** Crook et al disclose (fig 5A) the insulator (308) has a least a partial cross sections (circle) that is substantially circular in a plane substantially perpendicular to the probe conductor (306).

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 2, 4, 8, 10, 14, 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crook et al (US 5274336) in view of Scott et al (US 5748002)

**As to claims 2, 4, 8, 10, 14, 16**, Crook et al (US 5274336) disclose everything except for the probe conductor is formed within the coaxial conductor and termination is approximately 50 ohms. On the other hand, Scott et al teach the probe conductor (21) is formed within the coaxial conductor and termination is approximately 50 ohms (column 28 line 34-38) for the purpose of matching impedance.

It would have been obvious to one having an ordinary skill in the art at the time of the invention was made to modify Thrasher et al' probe and used the resistor value of Scott et al for the purpose of matching impedance.
